

Panuwat Takham

SOFTWARE ENGINEERING

CONTACT:

- 0839230703
- panuwattakham2002@gmail.com
- github.com/Panuwat-ta
- panuwat.me/portfolio-website

SKILLS:

- JavaScript / Node.js / Express
- Python / FastAPI
- Flutter / Dart
- React / HTML / CSS
- Unity / C#
- MongoDB / PostgreSQL / SQLite
- REST API / Git / Jira
- Teamwork

EDUCATION:

RMUTL CHIANG MAI —
SOFTWARE ENGINEERING
Faculty of Engineering (Electrical),
B.Eng. Year 3, Regular program
GPA 3.50 • Expected 2027

LANGUAGE:

- Thai (Native)
- English (Intermediate)

LINKS & EVIDENCE:

SCAMGUARD

Live demo: panuwat.vercel.app

TEXT-EXTRACTOR
github.com/Panuwat-ta/desktop-app-text-extractor
MIT license + Windows installer

PROFILE:

Software engineering student (Year 3, GPA 3.50) seeking a cooperative education placement, building full-stack and AI-integrated apps end to end: mobile, web, backend and deployment. Evidence in 4 shipped repositories with docs, tests and live demo. Works in a team with Git branches, reviews and Jira tracking.

EXPERIENCE:

- SCAMGUARD — SCAM IMAGE DETECTION | CAPSTONE PROJECT
Flutter (BLoC) + FastAPI + React + PostgreSQL/Redis
- Designed and built the full system end to end: Flutter app (Clean Architecture + flutter_bloc), FastAPI backend and React 19 + Vite admin portal with audit log
 - Integrated a 3-layer pipeline: SegFormer MiT-B2 ONNX inference, Surya OCR and reverse image search with hybrid worst-case risk scoring
 - Secured the API with JWT auth, rate limiting and Redis image-hash caching; stored data in PostgreSQL 15 via Alembic migrations
 - Wrote SRS and C1–C4 architecture docs with pytest API tests; tracked sprints on Jira with Git branch and review workflow

- RPG MONSTER — 2D PIXEL RPG GAME | VOCATIONAL CAPSTONE PROJECT
Unity 2022 + C# — Windows x86_64
- Built a top-down 2D pixel-art RPG in Unity 2022 + C# with directional melee combat, HP/death logic and 2 scenes; shipped a playable Windows x86_64 exe via Releases
 - Implemented monster AI with wave spawning, coin pickups with counter UI and item drops using TextMeshPro and Physics2D
 - Built heal stations, a 3-slot skill hotbar with cooldown UI and HP/attack upgrades wired to HUD state

- DATA LINKS — LINK & NOTE PLATFORM | PERSONAL PROJECT
Node.js/Express + MongoDB — live at panuwat.vercel.app
- Built and deployed Data Links v6.1.3 on Vercel (98 commits): 10 server-served pages with per-page JS/CSS and minified cached assets
 - Implemented auth with bcrypt hashing, email verification, password reset and profiles; link/note CRUD with search, filters and edit history on MongoDB/Mongoose
 - Integrated Google Drive API v3 for folder browsing, multipart uploads with progress/cancel and JSZip folder downloads

- TEXT-EXTRACTOR DESKTOP APP | PERSONAL PROJECT
Electron + Python OCR (Tesseract / Surya)
- Built Text-Extractor v1.4.2 on Electron 28: Tesseract.js plus a spawned Surya Flask service (CUDA/MPS auto-detect, /ocr and /ocr/batch) for Thai/English JPG, PNG and PDF
 - Shipped a Windows installer (Inno Setup + electron-builder) bootstrapping Python 3.11, PyTorch and Surya models; added 50-item history, tray and image preprocessing
